SUBJECT INDEX

Alloys
erosion of solid-solution-strengthened alloys, 193
investigations into the burnishing of external cylindrical surfaces of 70/30 Cu–Zn alloy, 123
the erosion of structural alloys, cermets and *in situ* oxide scales on steels, 31

Bearings
a study of a two-lobe journal bearing considering elastohydrodynamic effects, 161
a theoretical investigation of the effect of inlet pocket size on the performance of hole entry hybrid journal bearings employing capillary restrictors, 307
Brakes
computer simulation of the lining wear process in friction brakes, 283
Burnishing
investigations into the burnishing of external cylindrical surfaces of 70/30 Cu–Zn alloy, 123
work hardening and tool surface damage in burnishing, 149

Carbides
some investigations of the wear mechanisms of Widalon carbide inserts in machining EN24 (317 M 40) steel, 229
Carbon
friction and wear of an electrically conductive polyester–carbon film, 15
Cermets
the erosion of structural alloys, cermets and *in situ* oxide scales on steels, 31
Coatings
the use of platinum in thin tribological coatings, 269
Computer simulation
computer simulation of the lining wear process in friction brakes, 283
Contacts
determination of contact deformation in flat junctions by the random field method, 53
Copper
investigations into the burnishing of external cylindrical surfaces of 70/30 Cu–Zn alloy, 123
Cutting
cutting tool wear of laser-surface-melted high speed steels, 253
improving the performance of aqueous cutting fluids by galvanic–cathodic protection of cutting tools, 241
optical flank wear monitoring of cutting tools by image processing, 207
Cutting fluids
improving the performance of aqueous cutting fluids by galvanic–cathodic protection of cutting tools, 241
Cutting tools
cutting tool wear of laser-surface-melted high speed steels, 253
improving the performance of aqueous cutting fluids by galvanic–cathodic protection of cutting tools, 241
optical flank wear monitoring of cutting tools by image processing, 207

Deformation
a simple method for distinguishing between deformation and wear of modified surfaces, 221
determination of contact deformation in flat junctions by the random field method, 53
Diamond
sliding damage on hot-pressed and sintered silicon nitride caused by a diamond tip under controlled humidity, 65

Elastohydrodynamics
a study of a two-lobe journal bearing considering elastohydrodynamic effects, 161
Electrical conduction
friction and wear of an electrically

© Elsevier Sequoia/Printed in The Netherlands

conductive polyester–carbon film, 15
Erosion
erosion of solid-solution-strengthened alloys, 193
the erosion of structural alloys, cermets and *in situ* oxide scales on steels, 31

Films
friction and wear of an electrically conductive polyester–carbon film, 15
Friction
computer simulation of the lining wear process in friction brakes, 283
friction and wear of an electrically conductive polyester–carbon film, 15

Gears
the surface strength of gears and the rheological characteristics of lubricants, 1
Grinding
modelling of grinding wheel life by the group method of data handling technique together with sensitivity analysis, 179
Grinding wheels
modelling of grinding wheel life by the group method of data handling technique together with sensitivity analysis, 179

Hybrid bearings
a theoretical investigation of the effect of inlet pocket size on the performance of hole entry hybrid journal bearings employing capillary restrictors, 307

Image processing
optical flank wear monitoring of cutting tools by image processing, 207

Journal bearings
a study of a two-lobe journal bearing considering elastohydrodynamic effects, 161
a theoretical investigation of the effect of inlet pocket size on the performance of hole entry hybrid journal bearings employing capillary restrictors, 307

Lasers
cutting tool wear of laser-surface-melted high speed steels, 253
Lubricants
the surface strength of gears and the rheological characteristics of lubricants, 1

Machining
some investigations of the wear mechanisms of Widalon carbide inserts in machining EN24 (317 M 40) steel, 229
Metal transfer
metal transfer in the sliding process, 101

Optical methods
optical flank wear monitoring of cutting tools by image processing, 207
Oxides
the erosion of structural alloys, cermets and *in situ* oxide scales on steels, 31

Plates
final stage of a falling triangular plate, 111
Platinum
the use of platinum in thin tribological coatings, 269
Polyesters
friction and wear of an electrically conductive polyester–carbon film, 15
Polyethylene
scanning electron microscopy studies on wear of HDPE-filled natural rubber vulcanizates, 139
Pumps
an investigation into a modified port-plate seal of an axial piston water pump, 85

Random field method
determination of contact deformation in flat junctions by the random field method, 53
Rheology
the surface strength of gears and the rheological characteristics of lubricants, 1
Rubber
scanning electron microscopy studies on wear of HDPE-filled natural rubber vulcanizates, 139

Scanning electron microscopy
scanning electron microscopy studies on wear of HDPE-filled natural rubber vulcanizates, 139
Seals
an investigation into a modified port-plate seal of an axial piston water pump, 85
Silicon nitride
sliding damage on hot-pressed and sintered silicon nitride caused by a diamond tip under controlled humidity, 65
Sintered materials
sliding damage on hot-pressed and sintered silicon nitride caused by a diamond tip under controlled humidity, 65
Sliding
metal transfer in the sliding process, 101
sliding damage on hot-pressed and sintered silicon nitride caused by a diamond tip under controlled humidity, 65
Steels
cutting tool wear of laser-surface-melted high speed steels, 253
some investigations of the wear mechanisms of Widalon carbide inserts in machining EN24 (317 M 40) steel, 229
the erosion of structural alloys, cermets and *in situ* oxide scales on steels, 31
Surfaces
a simple method for distinguishing between deformation and wear of modified surfaces, 221
investigations into the burnishing of external cylindrical surfaces of 70/30 Cu–Zn alloy, 123
the surface strength of gears and the rheological characteristics of lubricants, 1
work hardening and tool surface damage in burnishing, 149
Tools
cutting tool wear of laser-surface-melted high speed steels, 253
improving the performance of aqueous cutting fluids by galvanic–cathodic protection of cutting tools, 241
work hardening and tool surface damage in burnishing, 149
Tribological coatings
the use of platinum in thin tribological coatings, 269

Wear
a simple method for distinguishing between deformation and wear of modified surfaces, 221
computer simulation of the lining wear process in friction brakes, 283
cutting tool wear of laser-surface-melted high speed steels, 253
friction and wear of an electrically conductive polyester–carbon film, 15
optical flank wear monitoring of cutting tools by image processing, 207
scanning electron microscopy studies on wear of HDPE-filled natural rubber vulcanizates, 139
some investigations of the wear mechanisms of Widalon carbide inserts in machining EN24 (317 M 40) steel, 229
Wear monitoring
optical flank wear monitoring of cutting tools by image processing, 207
Work hardening
work hardening and tool surface damage in burnishing, 149

Zinc
investigations into the burnishing of external cylindrical surfaces of 70/30 Cu–Zn alloy, 123
